[What SLIRE is?](#)

[Back to top](#)

Welcome to our Scientific Literature Referencing Internet Tool which is original by various ways, notably through the use of hierarchic thesauruses carried out by various networks of researchers.

SLIRE is a tool dedicated to researchers gathered into networks, having common research topics. For a given researchers' network, their common topic could be split into more simple items. This decomposition pertains to a hierarchic thesaurus against which scientific documents of common interest could be referred.

SLIRE hence enables researchers in network to have a common tool to work on, and this pertains to document referencing to assist in literature review.

SLIRE is innovative in the sense that it promotes the approach of decentralized document referencing, by the authors of the scientific documents, instead of a classical centralization by librarians.

SLIRE can work for as many researchers' network as one can imagine, or in other words, for many thesaurus in the same time.

Any coordinator of researchers' network can ask to manage document referencing through SLIRE. Request must be sent to michel.fok@cirad by indicating the name of the thesaurus he wants to use. In return, the requester will get a username, a password as the administrator of the thesaurus for his/her researchers' network. It will be his/her duty to develop his/her thesaurus. Separate manual will be provided to him/her in this case.

SLIRE is flexible, thesaurus can be adjusted along its use. The thesaurus administrator can take into account the suggestions of the network members to implement amendments.

No documents are stored but indications can be given to know how to get them (through Url of websites or emails of authors)

You can consult what is recorded in our data bases (click SEARCH).

If you want recording scientific documents into our data base, you must first join in (click NEW MEMBER) or log in if you have already joined in (Click CONNECT).

This is the first version of SLIRE. It's quite normal that it is not yet perfect. A great deal of the imperfections will be corrected in the second version.

[Back to top](#)

What you see when you log in <http://www.slire.net/slire/index.php?&lang=en>

[Here is the SLIRE.NET homepage](#)

[Back to top](#)

The tool is still partially multi-lingual. Better to work by selecting "English" although it works also pretty well in French

Click on search to consult the contents of the SLIRE database

Click on "connect" if you are already a member of a research network which has carried out its thesaurus

Click on to join a research network using SLIRE

[Consult: You have clicked on "search", here is what you see](#)

[Back to top](#)

It is possible to search according to various criteria as displayed here. Once you select a criterion, a scroll-down menu will assist you. You can also search through several criteria. To do so, you tick next to "multi-criterion" and you can pile sequentially as many criteria as you want in a single selection. Tick a criterion, select then a modality, click OK. Select another criterion, ..etc. You have to click on "new selection" to begin from the start of the multi-criteria selection. The originality is to select through thesaurus

Simple search

[Back to top](#)

What you get after selecting "country" and choosing "Benin" in the country scroll-down menu

The screenshot shows the SLIRE.NET search interface. At the top, there is a navigation menu with 'Home', 'New Member', 'Connect', and 'Search'. Below the menu, there are search options: '- Display all documents', '- Search by:', and 'Multi-criterion: Nouvelle sélection'. The search criteria are set to 'Country / Benin'. The search results show 5 documents. The first document is titled '61 | Mondialisation, distorsion de concurrence et évolution technologique : portée et limites du succès du coton en Afrique Zone Franc'.

You see that there are five documents corresponding to your search. Pass the mouse over the title of one identified article, to see if there is a website where to download the article or an email of the main author. click and select "display" to know more about the article.

Advanced sequential search

[Back to top](#)

In case of multi-criterion search, the corresponding radio button must be ticked.

The screenshot shows the SLIRE.NET search interface with an advanced search. The search criteria are set to 'Country / Cameroon'. The 'Multi-criterion' radio button is checked, and the 'Nouvelle sélection' option is selected. The search results show 1 document. The first document is titled '61 | Mondialisation, distorsion de concurrence et évolution technologique : portée et limites du succès du coton en Afrique Zone Franc'.

Here you have first ticked "country" and selected "Cameroon" in the scroll-down menu. You can tick another criterion, e.g. document type, to continue the search. If you want to search renew the multi-criterion search, you have to click "New selection", e.g. if you want to consult by "author" before searching what a given author has produced for a given country.

Join-in

You must join-in first before being allowed to implement the referencing of scientific documents of yours.

There is nothing new in the procedures of joining in, except the need to specify a domain which is indeed the thesaurus carried out by a research network.

For the current version, you can only join in a single domain. Later on, this constraint will be lifted, and multi-adhesion will be made possible.

"COLIRE" is a thesaurus developed to deal with the various impacts of cotton production.

Your subscription must be activated by the network administrator before you can start feeding the data base. In case of no information after your subscription, don't hesitate to contact the network administrator or "owner" (michel.fok@cirad.fr in the case of COLIRE). Do the same if you've forgotten your password

Log-in

Nothing particular to log in, once you know your log in name and your password and that your subscription has been activated.

My Account

Last name	First name	Status	Domain
20	FOK	Michel	Colire
@mail : michel.fok@yahoo.fr			

- Add a document
- Display all documents
- Search by :

Multi-criterion : **New selection**

Document type/ Document title /online : Yes - No : Validate.
 Continent / Country / Autor / Institution
 Thesaurus / Search in a Thesaurus / Date of inscription

Callout boxes:

- Click to display what you have registered yet. Through this function, you can modify the referencing you've implemented earlier.
- Click to add a document you want to implement the referencing
- You can implement the document searching while connected

Starting to add a document referencing

What you see when you start adding a new document to be referenced

[Back to top](#)

-- Slire -- Mozilla Firefox

http://www.slire.net/slire/php/popup1_tpl.php?lang=en&bt_ok=one&tab=nouvdoc

|< < Cancel > >|

Autor Details Country Characterization Validation

Auteurs list : Roques-Pascal

Rank	Last name	First name	Institution	Division
aut				

Autor

Callout boxes:

- You have to move gradually through the 5 stages, from "author" to "validation"
- Scroll-down here to check if one or all authors of the document is not already registered. Click on the arrow key to validate.
- If not, then type his name and first name with other initials and inform the institution and division to which he/she belongs. If you don't know, select "not informed". Click on the arrow key to validate

Indicating the authors

[Back to top](#)

Example of a document to be recorded,

The screenshot shows a web browser window titled "-- Slire -- Mozilla Firefox" with the address bar displaying "http://www.slire.net/slire/php/popup1_tpl.php?lang=en&bt_ok=one&tab=nouvdoc". The page contains a navigation bar with tabs: "Autor", "Details", "Country", "Characterization", and "Validation". Below the tabs is a dropdown menu for "Autors list" with "Bachelier-Bruno" selected. A table below has columns for Rank, Last name, First name, Institution, and Division. The "Rank" dropdown is set to "au1". Below this is a table titled "Autor" with the following data:

Rank	Last name	First name	Institution	Division		
1	Fok	Michel	CIRAD	UR 102	<input checked="" type="checkbox"/>	<input type="checkbox"/>
2	Bachelier	Bruno	CIRAD	UR 102	<input checked="" type="checkbox"/>	<input type="checkbox"/>

At the bottom, there is a control: "Delete the selection : check all/ uncheck all

Indicating the details of the document

[Back to top](#)

Part of what you see to inform about the document to be referenced. You must select the type of document. Here the "journal" type has been selected

The screenshot shows a web form with a navigation bar (Autor, Details, Country, Characterization, Validation) and a dropdown menu for "List of document type" with "Journal article" selected. Below is a section titled "Select a document type" with a sub-section for "Newspaper's article". The form contains the following fields:

- English Title
- Original Title
- Journal
- Year
- Issue Number
- Number of pages
- Volume
- Url
- Email

There are more or less fields to inform, according to the document type. Of course the more precisely you inform; the better.

The original title might be in English or not. If not, do your best to provide an English title

Do your best to inform this field if you know where the document can be obtained or downloaded.

Inform this field if you know the email of the corresponding author of the document

Indicating the related countries

[Back to top](#)

The document may refer to one or several specific countries. Select them by scrolling-down the related menu. Otherwise, select blank. Here Mozambique has been selected alone, but several countries can be selected sequentially

Referencing according to COLIRE Thesaurus

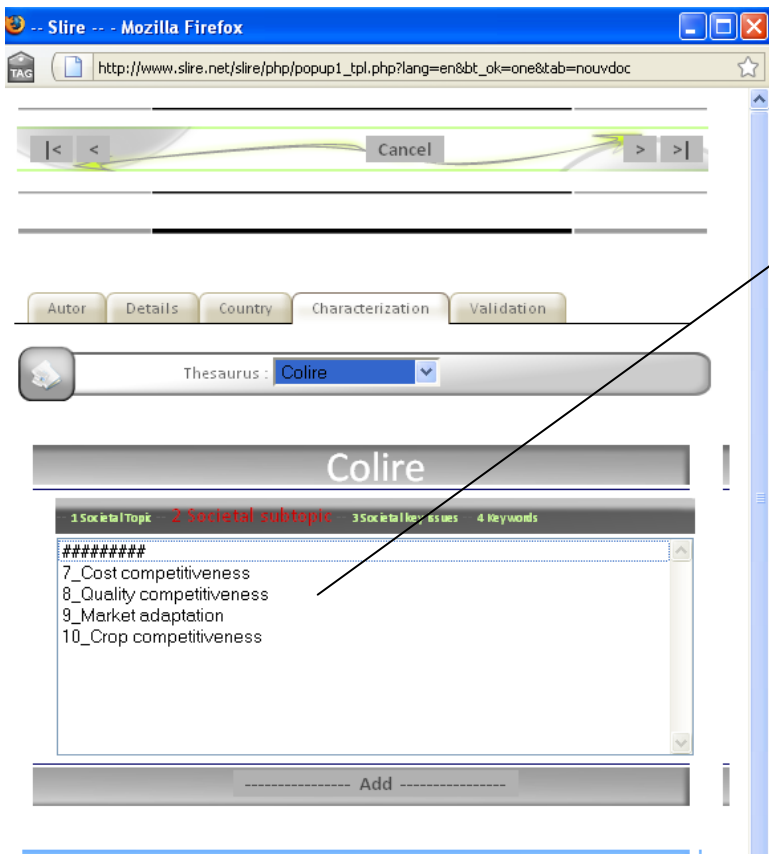

[Back to top](#)

Part of what you see when you start referencing your document according to the thesaurus you have selected, here "COLIRE". The originality is that you are assisted in the referencing

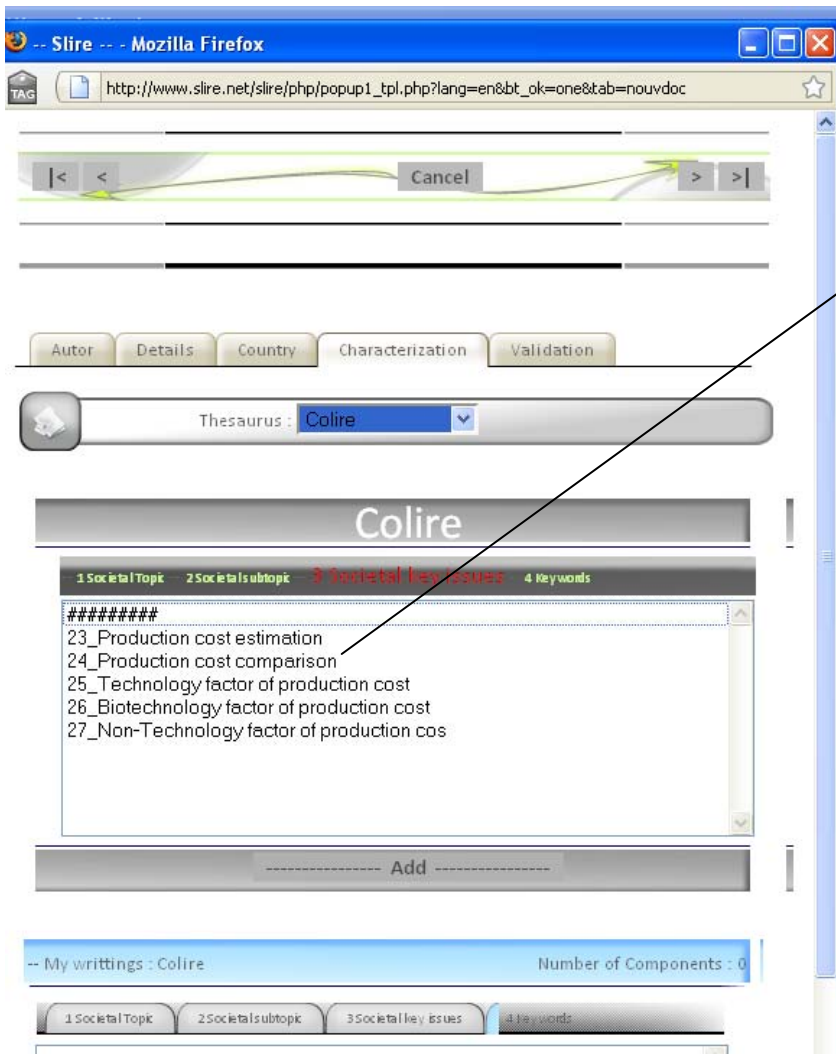

COLIRE is a 4-level thesaurus with the sequence of societal topic; societal subtopic; societal key issues and keywords.

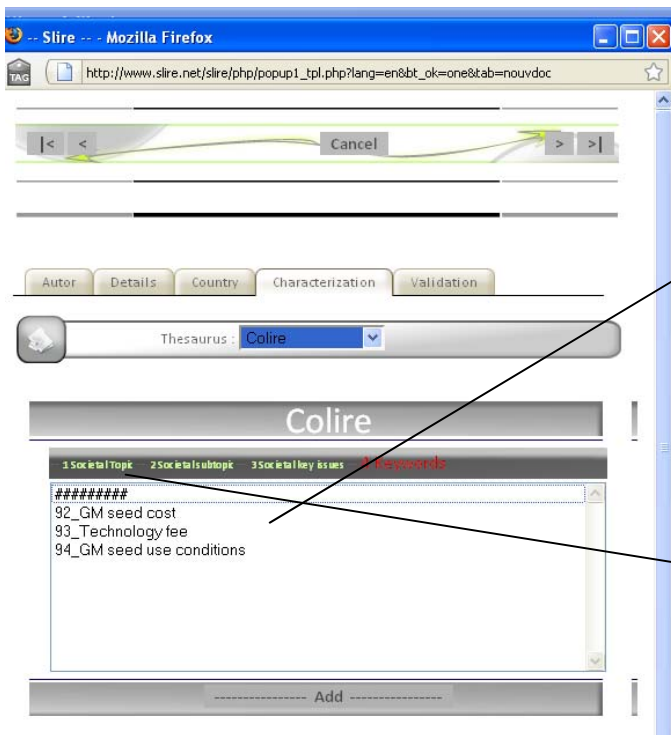

Double-click on one item of the first level to pass to the second level.

Here are the items of the second level, corresponding to "Competitiveness" you have selected at the first level. Let's assume that you want to select "cost competitiveness" here, just double-click on it.

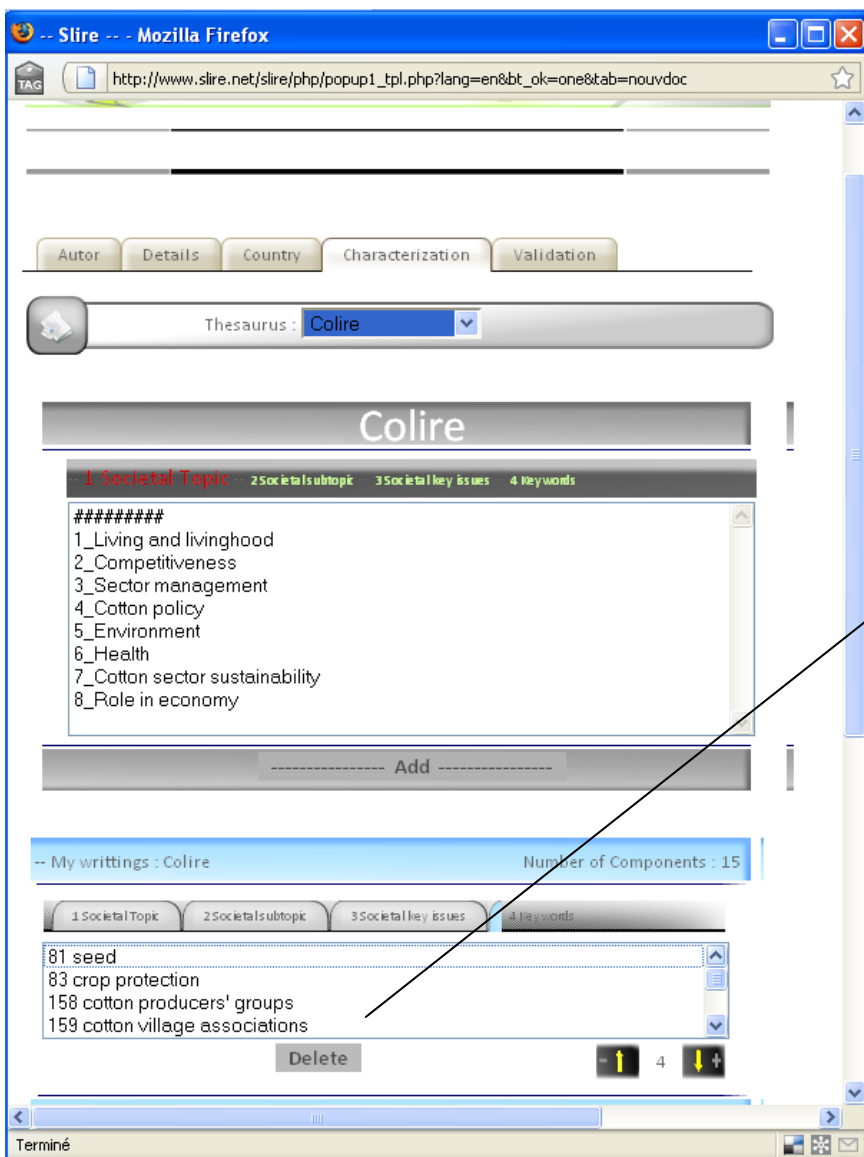

Here are the items of the third level, corresponding to "Cost Competitiveness" you have selected at the second level. Let's assume that you want to select "biotechnology factor of production cost" here, just double-click on it.

Here are the items of the last level, corresponding to "biotechnology factor of production cost". Select by clicking on one item, then click 'add'. Do it as many times as you find relevant keywords for the document you are referencing.

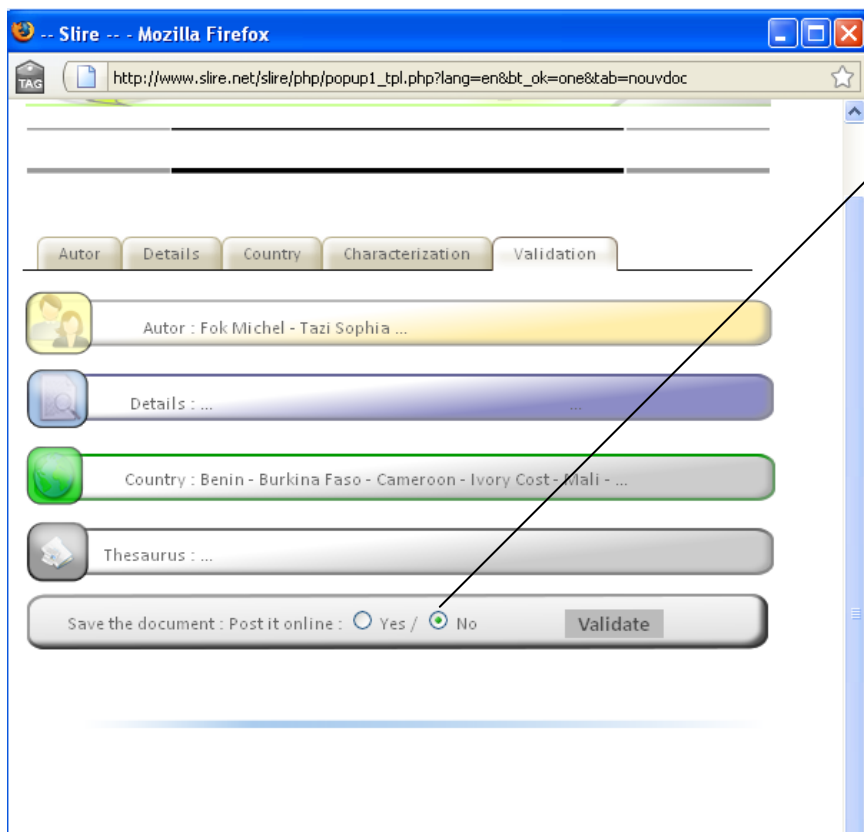

You have just finished a sequence of four levels referencing. Usually, there might be other relevant sequences for your document. So just restart by clicking on "societal topic". You can do this as many times as needed. You are not requested to do this referencing stage comprehensively once for all. This might look demanding. You can do it for the most relevant sequences, and complete them by other ones later on.

Display of the keywords selected according to the sequences of four-level thesaurus.
It remains to validate the whole process

Validating the referencing outcomes

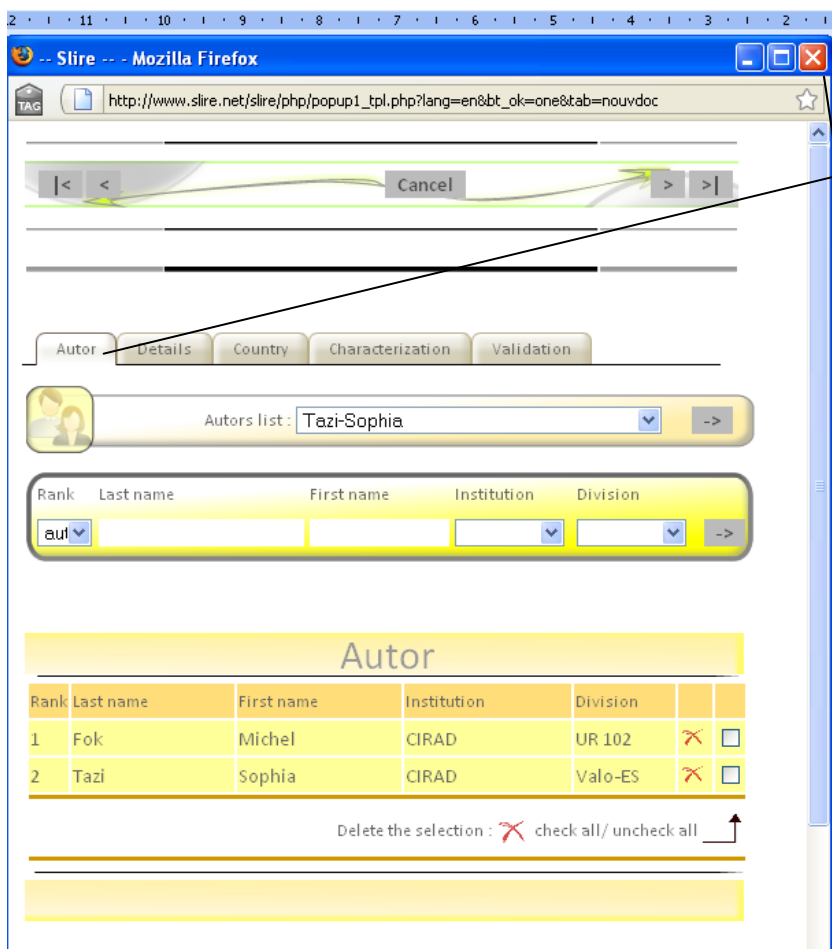

[Back to top](#)

Before clicking for validation, you have to decide if you post online the referencing you have just done. If this referencing appears to be rather complete, tick "Yes" so that your document will add to the pool of the data base that visitors can consult

Add another document or quit?

[Back to top](#)

To add another document, click on "author". The authors you have just selected have remained. If they are the authors of the new document to add, then skip this stage and go "details". Otherwise, select or add other authors.

If you have no more articles to add, then click on "close" to quit
